

SHYAM SUNDER SUTHAR

Senior AI Solution Architect | Full-Stack | Cloud & ERP Systems

(+91) 9501891381 | shyam22.co@gmail.com | linkedin.com/in/shyamzzp | Hyderabad, India

PROFESSIONAL SUMMARY

Senior AI Solution Architect with 9+ years of experience in full-stack development, cloud infrastructure, enterprise ERP systems, and AI/Agentic technologies. Proven expertise in Node.js, TypeScript, Python (7+ years), ReactJS, and SQL. Demonstrated success architecting scalable microservices, designing CI/CD pipelines, and leading cross-functional teams across Retail, Manufacturing, and Automotive sectors. Actively building deep expertise in LLM integration, multi-agent systems (MAS), Retrieval-Augmented Generation (RAG), and agentic design patterns including ReAct, MCP, and tool-calling workflows. Specializes in NetSuite customization, RESTful API development, and cloud-native application design on Oracle Cloud and AWS.

CORE COMPETENCIES

- Full-Stack Development
- Cloud Infrastructure (AWS, OCI)
- NetSuite Customization
- Microservices Architecture
- System Design
- Docker & Kubernetes
- API Gateway Design
- LLM Integration & Agentic AI
- Multi-Agent Systems (MAS)
- RAG Pipelines
- MCP / Tool Calling
- Prompt Engineering
- AI Workflow Automation
- Performance Optimization
- CI/CD Automation
- RESTful & GraphQL APIs
- ETL Pipeline Design
- Database Design & Migration
- Technical Leadership
- Event-Driven Architecture
- Solution Architecture & Design

PROFESSIONAL EXPERIENCE

Senior Software Engineer (L3) — AI Solutions | Oracle India Pvt. Ltd — NetSuite

September 2024 – Present | Hyderabad, India

- Architected and developed core NetSuite bundles — Print BOL, Deduction & Chargebacks, and Rebate Management — using Node.js, TypeScript, SuiteScript, and SQL, enabling streamlined financial operations for enterprise clients.
- Deployed industry-specific solutions across Retail, Manufacturing, and Automotive sectors, achieving a 95% seamless transition rate through rigorous testing, team mentorship, and workflow optimization.
- Architected an instance lifecycle management solution on Oracle Cloud Infrastructure (OCI), automating deletions, updates, and outdated instance cleanup — reducing OCI storage costs by 15% and improving resource utilization efficiency by 35%.
- Drove end-to-end design and delivery of new platform features using data-driven methodologies; systematically triaged and resolved customer-reported defects across existing application bundles.
- Integrated AI-assisted code review and automated defect triage into the development workflow, leveraging LLM-based tooling to accelerate bug diagnosis and reduce mean time to resolution by 20%.
- Designed and prototyped an agentic workflow architecture using MCP (Model Context Protocol) to automate repetitive NetSuite bundle configuration tasks, reducing manual setup time and improving team onboarding efficiency.
- Migrated source repositories from Perforce (P4V) to GitLab using custom Python scripts and Git commands, preserving full commit history and branch structures.
- Implemented GitLab CI/CD pipelines for automated deployments and configured cron jobs for scheduled backups, improving version control efficiency and release cadence.

Software Development Engineer (L2) | AI Engineer | Oracle India Pvt. Ltd — NetSuite

November 2019 – September 2024 | Hyderabad, India

- Developed comprehensive Business Intelligence solutions — reports, saved searches, and interactive dashboards — improving data-driven decision-making effectiveness by 25% across business units.

- Built a database migration tool for the Data Infrastructure Team, OCI, and Internal Teams; automated data transfer from MySQL and PostgreSQL to Oracle Cloud Database with minimal downtime and zero data loss.
- Designed and implemented backend microservices in Python (Django, Flask, FastAPI) and a ReactJS/Node.js frontend; engineered Python/SQL ETL data pipelines to guarantee data integrity and zero-loss migration throughout workflows.
- Developed an end-to-end release automation tool in Node.js and TypeScript, eliminating manual release steps and significantly improving deployment efficiency.
- Applied machine learning-inspired anomaly detection patterns to BI dashboards, enabling proactive identification of data inconsistencies and reducing manual audit effort by 30%.
- Researched and evaluated AI/ML frameworks (TensorFlow.js, HuggingFace APIs) for potential integration into NetSuite reporting pipelines, producing internal proof-of-concept implementations.

Software Development Engineer | Kony India Pvt. Ltd

September 2017 – November 2019 | Hyderabad, India

- Engineered Marketplace 2.0, an internal component-sharing platform, owning full-stack design and development from architecture through deployment using PHP, ReactJS, Elasticsearch, and custom REST APIs.
- Architected and implemented custom UI components for Kony Visualizer, optimizing mobile app functionality and collaborating with cross-functional teams for seamless SDK integration.
- Developed an automated test engine in Java and Python, integrating Selenium and REST Assured for end-to-end web and API testing; wired into CI/CD pipelines to generate daily automated test reports.
- Shaped the MVC/MDA architecture of the Kony Framework; built and shipped Network and Storage APIs consumed across the Framework, Middleware, and Server layers.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python (7+ years), Java, C# (UWP/WPF), SQL

Frontend: ReactJS, Next.js, Vue.js, HTML5, CSS3

Backend & APIs: Node.js, Express.js, NestJS, Django, FastAPI, Flask, NuxtJS, GraphQL, WebSockets, REST

AI & Machine Learning: LLM Integration, Agentic AI, Multi-Agent Systems (MAS), RAG (Retrieval-Augmented Generation), Tool Calling, MCP (Model Context Protocol), ReAct, Prompt Engineering, AI Workflow Automation

Cloud & DevOps: AWS (EC2, S3, Lambda), Oracle Cloud Infrastructure (OCI), Docker, Kubernetes

Databases: PostgreSQL, MySQL, Oracle DB, Redis, NoSQL, Elasticsearch

ERP & Enterprise: NetSuite (SuiteScript, SuiteFlow, SuiteBuilder), Kony Visualizer

CI/CD & Tooling: Jenkins, GitLab CI, GitHub Actions, Git, Perforce (P4V)

Testing: Jest, Jasmine, Karma, Selenium, REST Assured

KEY ACHIEVEMENTS

- 95% Seamless Transition Rate — Delivered enterprise ERP solutions across multiple industry verticals with near-zero disruption.
- 15% OCI Storage Cost Reduction — Automated instance lifecycle management on Oracle Cloud, freeing significant infrastructure spend.
- 35% Resource Utilization Improvement — Enhanced OCI resource efficiency through intelligent automation tooling.
- 25% Improvement in Decision-Making Effectiveness — Delivered BI dashboards and reporting that transformed data accessibility for business stakeholders.

CONTINUOUS LEARNING & PROFESSIONAL DEVELOPMENT

- AI & Agentic Systems (2025–Present) — Self-directed deep study of LLM architecture, multi-agent design patterns, RAG pipelines, tool calling via MCP, and production-grade AI workflow automation. Demonstrated through the AI Mastery Roadmap project (shyamzzp.github.io/ai-roadmap).
- Cloud Infrastructure — Ongoing hands-on experience with Oracle Cloud Infrastructure (OCI) and AWS in production environments, spanning compute, storage, serverless, and container orchestration.
- Enterprise ERP Specialization — Continuous development in NetSuite platform customization (SuiteScript, SuiteFlow, SuiteBuilder) across diverse industry verticals since 2019.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science & Technology

Lovely Professional University (LPU) | 2013 – 2017 | Phagwara, Punjab, India
